

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions of claims in the application.

1-41. (Cancelled)

42. (New): An actuator comprising:

a conductive polymer; and

electrolyte solution containing operational electrolyte,

wherein said operational electrolyte is anions which include trifluoromethanesulfonate ion and/or plural of fluorine atoms which bond to central atom.

43. (New): An actuator as set forth in claim 42, wherein said conductive polymer incorporates the anions which include trifluoromethanesulfonate ion and/or plural of fluorine atoms which bond to central atom.

44. (New): An actuator as set forth in claim 42, wherein said conductive polymer exhibits deformability by electrochemical redox, and electrochemical strain per redox of said conductive polymer is not less than 3%.

45. (New): An actuator as set forth in claim 42, wherein said conductive polymer has an

Amendment under 37 C.F.R. § 1.111
Attorney Docket No. 091678
Application No.: 10/523,985

electrochemical stress not less than 3.9 MPa.

46. (New): An actuator as set forth in claim 42, wherein said actuator comprises an operational part, a counter electrode and electrolyte solution, and

 said operational part includes said conductive polymer and the electrolyte solution containing operational electrolyte.

47. (New): An actuator as set forth in claim 42, wherein said conductive polymer includes pyrrole and/or pyrrole derivatives in a molecule chain.

48. (New): An actuator as set forth in claim 42, wherein electrochemical strain of the actuator per redox cycle of 20 seconds is not less than 3% in the length direction
